

# Element 5 Mass Timber Structures

---

Element 5 specializes in the design, fabrication, and assembly of modern timber buildings. They work with solid wood, the world's most flexible and only renewable building materials.

HQ: Toronto, Ontario, Canada

Industry: Industrial Manufacturing - Lumber & Wood

## Business Challenges

- Greenfield startup - no building and no servers
- Implementation started during COVID lock down in Canada. Partner was never onsite.
- Didn't have business processes - only flow maps/charts

"Having to work remotely, the cloud based solution for us has been instrumental in getting us to the point where we are.

It's not a customization. It's a personalization that you have access to. We've been able to adapt our practices and processes to follow standard CloudSuite Industrial. Everything is at your finger tips."

*Scott Falcone, Manager, ELEMENT5*

## Benefits Achieved

- Flexibility & Agility
- Instant access to information
- Segregation of duties - proper controls in place for financial and security audits
- Seamless monthly update process
